                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    synapses and neuronal cell signaling. Could be an adapter protein linking ion channel to the subsynaptic cytoskeleton. May induce enrichment of PSD-95/SAP90 at the plasma membrane.

SUBUNIT: Interacts with DLG1 and DLG4/PSD-95 (By similarity).

SUBCELLULAR LOCATION: Membrane-associated (By similarity).

ALTERNATIVE PRODUCTS: 2 isoforms; 1 (shown here) and 2; may be produced by alternative splicing.

SIMILARITY: BELONGS TO THE SAPAP FAMILY.

"The ribosomal protein gene cluster of Mycoplasma capricolum.";
Mol. Gen. Genet. 210:314-322(1987).
-i- FUNCTION: PROTEIN S19 FORMS A COMPLEX WITH S13 THAT BINDS STI
TO THE 16S RIBOSOMAL RNA (BY SIMILARITY).
-i- SIMILARITY: BELONGS TO THE S19P FAMILY OF RIBOSOMAL PROTEINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SEQUENCE FROM N.A.

                                                                                                                                                                                            An actual mol. wt. of 16.4kD can be calculated from the sequence. Fill-type fimbriae was purified from CH4 (02:K1:H-serotype) E. colisolated from the affected hearts of chickens with colibacillosis. The first 17 amino acids at the N-terminal are identical to the Fil subunit. A vaccine prepd. was prepared from Fil-type fimbriae which protected poultry from E.coli septicaemia.

                                                                                                                                                                                                                                                                                                                                                                                                                                                   Vaccines containing this protein confer protection against urinary infections, so that the need for antibiotic therpy is avoided. The protein is from a specific type of pilus associated with most uropathogenic E. coli strains. The peptide fragments Pro(5)-Thr(12) and Ala(65)-Gly(75), each optionally having a Cys residue at one of their terminii, are separately claimed. Any protein whose amino acid sequence includes one of these fragments is suitable for use in a vaccine, esp. the CNBr-II fragment corresponding to amino acids 53-163 of HU849 pilin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New peptide(s) having 8 or 11 amino acid residues - useful with derivs. as conjugates in vaccines for conferring protection against urinary tract infections

The pilus protein component may be an adhesin or a pilin. Pilus associablesins, such as FimH are relatively component.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             immunogenic complexes act by disrupting pilus-mediated attachment of E. coli to urinary epithelia and may prevent or retard the development of urinary tract infections. Vaccines containing the complexes are useful for preventing urinary tract disease in a human caused by the bacterium family enterobacteriaceae specifically Escherichia coli and may also be used in treating the disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            adhesins, such as FimH are relatively conserved proteins among different species and strains of the strains, therefore vaccines incorporating the FimH antigen exhibit a broad spectrum of protection compared with current pilus-fiber based vaccines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
```

0,

The present invention provides antibacterial compounds which are able interfere with Gram-negative bacteria pilus formation and assembly, an pilus interaction with chaperone proteins. These are useful in the treatment of bacterial infection, and in the prevention of biofilm

                                                                                                             reproductive-specific proteins are useful for diagnosing infertility which is a result of reduced sperm count, reduced sperm motility, malformed sperm or combinations of these. The sequences of the inventiare useful as markers for spermatogonial cells, for identifying genes proteins characteristic of male infertility, diagnosing or aiding in the diagnosis of infertility in men, and for contraception in which sperm production or sperm count is reduced or defetive sperm is produced. Antibodies to reproductive-specific proteins are useful for determining the presence of these proteins in a sample obtained from a man being assessed for infertility, for identifying the expression of genes in particular cell type or particular developmental stage, for studies of spermatogenesis, and for immunofluorescence of germ cells of the second of 
                      in Western blots for assessing the presence of the protein the antibody binds. The sequences of the invention are also useful for treating disorders of reduced sperm count, and for increasing sperm count and/or sperm activity. The nucleic acids of the invention are useful in gene
                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to the isolation of novel mammalian human reproductive-specific proteins (AAU07859-AAU07899), and the nucleic acids encoding them. The nucleic acids encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 22;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel reproduction-specific protein, useful for treating disorders reduced sperm count, enhancing/increasing sperm count and/or sperm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Wang

                                                                                                                                                                                                                          represent nucleotide sequences encoding human breast, gastric and prostate cancer associated antigen precursors (CAAP) respectively.

AAB63732 to AAB63467, AAB63468 to AAB63721 and AAB63722 to AAB63970 represent human breast, gastric and prostate CAAP protein sequence respectively. CAAPs have cytostatic activity and can be used in the production of cancer vaccines. The human CAAP proteins, peptides, nu acids or anti-CAAP antibodies are useful for diagnosing and treating condition characterised by expression of an abnormal amount of a proceeding the protein of the protein of a procession condition characterised by expression of an abnormal amount of a procession condition characterised by expression of an abnormal amount of a procession condition characterised by expression of an abnormal amount of a procession condition characterised by expression of an abnormal amount of a procession condition characterised by expression of an abnormal amount of a procession condition characterised by expression of an abnormal amount of a procession condition characterised by expression of an abnormal amount of a procession condition characterised by expression of an abnormal amount of a procession condition characterised by expression of an abnormal amount of a procession condition characterised by expression of an abnormal amount of a procession condition characterised by expression condition characterised by expression of an abnormal amount of a procession condition characterised by expression characteristerised by expression characterised
